EXPERIENCE

Associate Software Developer, Sigo Signs

June 2025 - Jan 2026

- Built a Python automation pipeline handling **100k+ file operations** with throttling, retry logic, and permission-aware error handling, added dry-run/apply modes and CSV audit trails so ops teams could validate safely before committing changes.
- Designed and built an order management product in Next.js + TypeScript, identified workflow gaps across the ops team, mapped the data model, and shipped a solution adopted daily across **6,000+ active orders**.
- Designed a .NET Core Web API with OOP principles and Swagger documentation, resolving internal teams issues with a clean, self-documented interface for data operations.

Full Stack Engineer - BodyCraft

Jan 2026 - Apr 2026

- Designed and engineered a full-stack freemium Native app end-to-end with **25+ MAU**.
- Built a **117+ content library**, and multi-program system targeting first workout in under 3 minutes leading to higher retention rates.
- Architected and deployed a cloud-native backend on Firebase with a Firestore data model supporting concurrent users, real-time sync, Auth and a freemium entitlement layer, validated in production as a PWA before iOS launch.
